

Hay Burners Equine LLC Using our slow feed nets

Installing the hay basket topper

Set topper inside basket, find buckle on the topper, attach that to the leg on the side you will want to refill from. Walk elastic around edge of the basket until its completely under the lip of basket. Slide net around basket lip so the 3 cord ties line up with each leg of basket frame. Attach each tie to remaining basket legs looping the elastic into the tie. These ties will hold topper in place when you unclip the buckle and pull the elastic over lip for refilling.

Occasionally we encounter over achieving equines that lift the elastic. It may be necessary to add a couple of tie down spots if they keep lifting the elastic over the edge. This is easily done with some twine/cord and a snap as shown below
